

The FCC limits power for dual band 5 GHz capable devices. If your network options are only 2.4 GHz, the original Bearifi BearExtender Outdoor will always be your best choice.

If you are looking for a range boost to 5 GHz network also, Bearifi Outdoor AC has very close to max FCC power for dual band devices and can connect at speeds up to 600 mbps to 802.11ac 5 GHz networks.
